

Indiana Youth Survey alcohol use chart

At the top of this chart is a title: “Alcohol Use During the Past Month by Indiana 12th Grade Students, 1991-2022.”

The chart is black text on a white background with blue vertical bars. An orange line runs near the top of the bars.

The Y-axis of the chart runs from 0 to 100, with 0 at the bottom. The X-axis of the chart runs from 1991 to 2022. There are blue bars above every date except 2019 and 2021.

The blue bars indicate the percentage of alcohol use reported among 12th-grade students in Indiana. The orange line indicates the percentage of alcohol use reported among 12th-grade students across the United States.

From 1991 to 2006, the blue bars fall from about 60 to 40 percent. From 2007 to 2022, the blue bars fall from about 40 to 20. The tallest blue bar reaches 60 percent, in 1991, and the shortest blue bar reaches 20 percent, in 2022. The bars trend downward year-to-year, with some slight fluctuation, mostly from 1994 to 1999.

The orange line follows the bar very closely, with a few a few dips below the top of the blue bars: 1991, 1992, 1993, 1994, 1996 and 2016. The orange line stops at 2021.

At the bottom of the chart is a key: A thick blue horizontal line labeled “Indiana” and a thin orange horizontal line labeled “US.”
